Wireless Analogue Signal Sensor

EPISENSOR

// Introduction

EpiSensor's analogue signal sensor (ZIO/ZVO) is a rugged, mains-powered sensor used to monitor flow rates, pressure levels, pH or any other energy related output which uses the industry standard 4-20mA current loop or 0-10V signal.
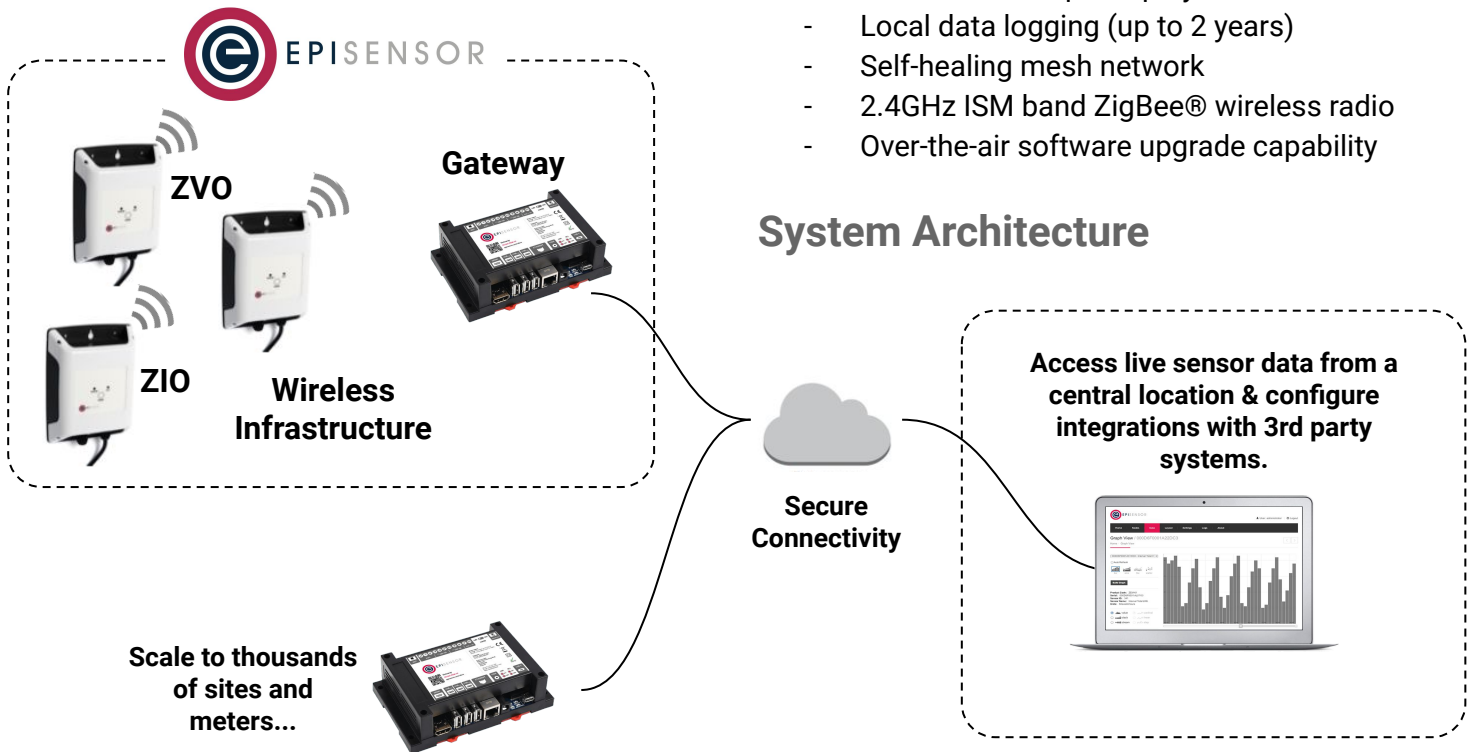

The data is recorded and transferred securely over a wireless mesh network to a central EpiSensor Gateway where it can be exported to a variety of 3rd party systems for storage, visualisation and analysis to improve energy efficiency and reduce cost.
